Data Center Solutions

DIGITAL VIDEO SECURITY

Mainline provides a complete digital video security solution at an affordable cost. No need to “piecemeal” your solution with multiple vendors.

Our solution:

- Provides high-quality imagery and data integrity for your business
- Ensures secure remote access is provided to the right people in your organization
- Has video surveillance technology options that can help deter unwanted events

See things more CLEARLY

In the past, the quality of surveillance solutions was hit or miss, with their fuzzy images and cheap, unreliable recording hardware leaving much to be desired. For modern needs, the Mainline Digital Video Security (MDVS) team has developed solutions that are scalable and customizable to the user's environment and budget requirements. This flexibility and design quality have helped the MDVS solutions group become one of the premier integrators in the industry.

By adding our proactive intelligence options, the MDVS solutions suite can also provide focused alerts, reporting and evidence search functions beyond the standard alert triggers found with most systems. With the aid of quality resolution camera technology, our clients can automate various daily surveillance operation functions, such as intrusion detection and video evidence archiving, with input from our consulting team. The MDVS solutions suite then becomes a true force multiplier in any environment.

Whatever your business, an IP video solution from Mainline Digital Video Security can give you the advantage you need to control costs while increasing safety and productivity in today's world, where intelligent security capabilities have become very important.

WHAT YOUR ORGANIZATION CAN ACHIEVE WITH DIGITAL VIDEO SURVEILLANCE:

- Deter and detect unwanted events
- Gain actionable intelligence that will guide rapid and effective response
- Minimize the risk of industrial theft (i.e., shrinkage)
- Protect premises from threats to property and assets
- Protect employers from false liability claims (e.g., personal injury, slips and falls)
- Increase public safety and security
- Enhance and monitor employee health and safety standards
- Meet OSHA requirements/verify claims
- Monitor employee behavior to increase safety and security
- Monitor customer behavior

MDVS SOLUTIONS ARE SCALABLE

High-performance and high-quality video in a smaller footprint

The certified results are undeniable. The MDVS solutions portfolio is designed with high performance and scalability in mind.

An affordable, effective and on-demand solution

Mainline provides a complete solution at an affordable cost. No need to "piecemeal" your solution with multiple vendors. Mainline offers a "best of breed" total package.

PERFORMANCE SOLUTIONS

More than just image quality

It's not just the image quality that distinguishes Mainline's solutions. MDVS offers an open, future-proof system that operates on a Windows platform. At the same time, the system utilizes large data storage platforms for disk, tape libraries and WORM drive systems. Using our high archival storage management configurations, our consultant team can help you turn the data that your surveillance system captures into a corporate enterprise asset.

In addition, MDVS makes solutions end-user friendly and compatible with any IP network. All our system packages are TCP/IP addressable, and cameras are simply another device on your network. This saves your personnel service time and business expense.

Whether your organization is upgrading an existing system or building a new video surveillance network, Mainline will team with you to ensure your complete satisfaction.

Features of Mainline Digital Video Security solutions:

- Plug-and-play compatible – devices sit on your existing IP network
- Ability to incorporate existing composite CCTV analog system on new IP-based open systems
- State-of-the-art video compression
- Automated archiving and retrieval
- Audio capture capability
- Smart Search pixel-based searching
- Fully programmable pan tilt zoom cameras
- Administrator-definable wavelet compression puts the user in control of image quality
- Remote access and diagnostic capabilities
- High-quality images even in low-light and near-infrared-light conditions
- Pixel-based motion detection, with image buffering, provides the most time-sensitive alarm system on the market

WHY MAINLINE DIGITAL VIDEO SECURITY?

People, products and performance

Mainline became one of the largest technology solution providers by ensuring that our customers have the best-designed solutions to meet their individual business needs. Our account executives and systems engineers take time to understand each customer's business and then recommend technology to enhance that business. Our execution model combines local product specialists, senior systems engineers and customer care specialists, forming a team of resources that truly sets Mainline apart from other solution providers.

The quantifiable risks requiring video surveillance are different for every business environment. Regardless of your business model or needs, high-quality digital video surveillance is now a necessity. Our solutions increase manageability and reduce total cost of ownership through the simple integration of existing camera systems and high-resolution digital HDTV cameras.
