

From the Data Center to the **DESKTOP**

IT Infrastructure

INNOVATIVE NETWORKING SOLUTIONS

Your network is the heart of your business, and making sure it is operating at maximum efficiency is critical. Whether you need assistance with managing your data center, converging your infrastructure, taking your network wireless, unifying your various communication tools and applications, or protecting yourself against security threats, Mainline Information Systems™ offers a comprehensive networking solutions portfolio to address your individual needs.

Comprehensive Networking Solutions from MAINLINE

DATA CENTER SOLUTIONS

Over the last decade, there has been an explosion in data due to the use of the Internet and Web-based technologies, which has made the data center more strategic than ever. The IDC estimates that in five years the size of the digital universe will multiply by a factor of 10. Managing that data growth is critical to maintaining strong business operations and efficiencies.

Customers need data centers that are scalable, flexible and adaptable to meet the challenges posed by the information explosion. Mainline can provide that solution.

Mainline's Data Center Solutions help customers:

- Better manage data center resources
- Deploy more robust business continuity
- Build cost-effective storage area networks
- Enhance data security
- Improve network efficiency
- Increase business productivity

CONVERGED INFRASTRUCTURE SOLUTIONS

If you are maintaining separate data and storage network infrastructures in your data center, you are probably duplicating equipment, space, energy and support costs. Adopting a single network based on Fibre Channel over Ethernet technology can provide significant savings. Mainline's network integration services for data center networks – data and storage – can help you design and implement a converged infrastructure to reduce costs without compromising security, availability and performance.

Mainline's network convergence solution provides services to design and implement a converged data and storage infrastructure that will allow you to quickly achieve the financial benefits of Fibre Channel over Ethernet technology. Mainline can develop a network design for converged data and storage at the levels of detail needed to gain stakeholder approval, assist you with technology evaluation and provide guidance for the implementation team. We can also roll out the new infrastructure in a controlled, successful manner, protecting access to your corporate data.

Benefits of convergence:

- Reduces costs by converging your data and storage network infrastructures
- Applies specialized data and storage skills and experience to address integrated networking environments
- Mitigates the risks associated with complex infrastructure upgrades

NETWORK SECURITY SOLUTIONS

As the number and complexity of information security attacks grows every day, so does the importance of your network's security. Security best practices, auditor requirements and compliance regulations mandate that organizations take additional steps to have more security defenses, policies and procedures. Mainline can help you take those steps and allow you to rest assured that your network is safe.

Mainline's Information Security solution offerings address security issues through a comprehensive portfolio of products (appliances and software), professional security services and managed security services. Combined, these solutions help customers address their network security issues and protect their investments for the future.

Mainline's Security Solutions help customers:

- Develop a strategic plan that leverages multilayered, preemptive security technologies
- Reduce risks
- Achieve regulatory compliance
- Maintain business continuity and reach security goals
- Upgrade and protect network environments to include best-of-breed security

OTHER NETWORK SOLUTIONS OFFERED BY MAINLINE

Integrated Wireless Solutions

Mainline is a leader in developing wireless solutions that address companies' major wireless network needs: high-speed access and bandwidth, security and information backup. Mainline works with a number of leading network vendors to provide and deliver the industry's best unified wired and wireless solutions. These solutions support real-time business applications and create a secure, mobile, interactive workplace for organizations deploying WLANs.

Benefits of an Integrated Wireless Solution:

- Reduced TCO
- Greater WLAN reliability and predictability
- Enhanced WLAN visibility and control
- Dynamic RF management
- Advanced WLAN security and network protection
- Unified wired and wireless networks
- Increased mobility for the enterprise
- Enhanced productivity, collaboration and responsiveness

Unified Communications Solutions

Unified Communications is a class of applications and services designed to improve communications within the modern organization to keep workgroups connected, enabling effective collaboration and streamlining of business processes. Using integrated IP voice, video, instant messaging, mobility, Web conferencing and presence sensibility, Mainline can help ensure that your employees are connected anywhere, anytime and with any device.

The Mainline Unified Communications portfolio includes:

- Presence and mobility applications
- Messaging
- Rich-media conferencing and collaboration solutions
- Unified contact center
- Disaster recovery

WHY MAINLINE?

Mainline Offers the **RIGHT EXPERTISE**

With more than 800 combined certifications, the Mainline team can assess your current environment and determine what kind of solution is most appropriate for your organization. Mainline customers can optimize and enhance the investments they have already made while efficiently planning for the future. Furthermore, with Mainline's network solutions, customers enjoy the simplicity and focused attention of a single, total-solution provider.

OUR PARTNERS

Mainline has forged strategic alliances and partnerships with the industry's most renowned technology providers. Through these partnerships, we are able to design solutions that address the most complex and demanding IT business needs while providing the highest level of availability, scalability and reliability.

We are an authorized reseller for the following companies: Cisco, Riverbed, IBM, Juniper, Brocade, HP, F5 and many other leading providers.
