

Bring Your Business Continuity to New Level!

Business-critical data and applications must be available around the clock, or serious business disruption could result.

In the past, the only way to address application availability was to perform regularly-scheduled backups, with no regard to data consistency across geographical boundaries, and no ability to recover information based on a significant transaction or business-based activity.

Times have changed.

Learn how Mainline Information Systems brings business continuity to a whole new level. Attend our upcoming seminar, "The Evolution of Business Resiliency" on Tuesday, May 20th and explore best practices, identify industry trends and meet industry experts that can help ensure operational continuity for your business before, during and after an incident.

Topics:

- Why do we care about data protection?
- The evolution from RAID to DR to Continuous Data Protection
- How much data protection do you need?
- What is a Virtual tape Library?
- Exploring best practices in Continuous Data Protection
- The new definition of Disaster Recovery

>> RSVP at www.mainline.com/level or contact us at 866.490.MAIN (6246).
